

— Front-End Developer & Creative Web Designer

I don't just want to build websites. I want to build *experiences* people remember.

I'm Hager — a Computer Science student who turns ideas into creative, interactive websites, one detail at a time.

About

Where design instinct meets code.

What first drew me in was the creative side of the web — then I fell in love with building it.

I'm a **Computer Science student** with a strong interest in Front-End Development, Web Design, and UI/UX. I enjoy thinking about how a website should look, how users will interact with it, and how different design elements can work together.

As I started learning and practicing more, I became increasingly interested in coding itself — using **HTML and CSS** to turn ideas into real, responsive websites. I'm especially drawn to projects for brands, companies, and e-commerce businesses that give me room to be creative while staying clean, simple, and professional.

I pay close attention to details, because I believe the little things — spacing, color, motion — make the biggest difference.

Faculty of Computers and Information

Damanhour University — Computer Science, First Year

Currently building my foundation in Computer Science while developing my skills in Web Development, Programming, UI/UX, and Design.

Design

Colors, layouts, typography, and the overall feeling of a website.

Coding

Turning designs into real websites and understanding what runs beneath.

Creativity

A unique touch on every project — nothing looks the same twice.

Details

Spacing, color, animation, interaction — the small things matter.

Learning

Always exploring new technologies and areas of tech.

Skills

What I build with.

A front-end toolkit paired with a design eye and a growing programming base.

WEB DEVELOPMENT

VS Code

Figma

Canva

My approach.

Five steps, every project — from the first idea to the finishing touch.

01

Understand

I start by understanding the idea, the target audience, and what the website needs to achieve.

02

Design

I think about the visual identity, colors, layout, user experience, and the overall feeling of the website.

03

Build

I turn the idea into a responsive and interactive website using code.

04

Refine

I focus on the small details, interactions, animations, and everything that improves the experience.

05

Make it yours

The final step is adding the unique touch that makes the project different from a standard website.

— Experience

Beyond the screen.

Community work that shaped how I collaborate and organize.

Organizing Committee Member

GDG Damanhour

- Contributed to organizing and supporting technical events.
- Worked as part of a team on event logistics and attendee experience.
- Participated in creative activities and event preparation.
- Developed teamwork, communication, organization, and problem-solving skills through hands-on experience.

— Featured Projects

Selected work.

Five projects across front-end development, UI/UX design, data analysis, and academic research.

HTML5 CSS3 JavaScript

Beheira Tourism Web App

A fully responsive web application showcasing cultural and historical landmarks of the Beheira Governorate with intuitive navigation and modern layouts.

AI in Education

Prepared by:

Nagham Mohammed

Basant Mohammed

Hager Elshahat

LaTeX

Research

AI Ethics

AI in Education — Literature Review

A systematic research study analyzing 20 papers on AI applications in higher education, structured and formatted professionally using LaTeX.

UI/UX Design

Mobile App

Setr - Modest Fashion App

Currently designing screen flows, user research, and wireframes for a modesty-focused fashion app aimed at delivering a personalized shopping experience.

— Services

How I can help.

From a single landing page to a full brand website.

Front-End Development

Building responsive and interactive websites with a focus on clean design and user experience.

Creative Websites

Visually unique websites for brands, companies, and creative projects.

Landing Pages

Modern landing pages that are clear, engaging, and responsive.

UI Implementation

Turning UI designs into functional and responsive web interfaces.

E-Commerce Websites

Modern interfaces for online stores with a strong focus on usability and visual presentation.

Achievements & Activities

Along the way.

— Active member of the GDG Damanhour community.

— Participated in organizing and supporting technical events.

— Continuously developing skills in Front-End Development, UI/UX, Programming, and Design.

— Participated in technical and academic projects as part of my Computer Science journey.

— Testimonials

What people say.

"This space is saved for feedback from people I've worked with — coming soon."

— Let's build something different

Have an idea? Let's turn it into *something memorable.*
